

Project Design Phase
Proposed Solution Template

Date	09 February 2026
Team ID	LTVIP2026TMIDS90611
Project Name	Travel-Itinerary-Generator
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Planning a trip can be time-consuming and confusing because travelers must search multiple websites for destinations, attractions, accommodation, and travel schedules. Many users struggle to organize their travel plans efficiently. The Travel Itinerary Generator solves this problem by automatically generating personalized travel itineraries based on user preferences such as destination, travel dates, budget, and interests.
2.	Idea / Solution description	The Travel Itinerary Generator is a smart web application that helps users create customized travel plans easily. Users enter their travel preferences such as destination, number of days, budget, and interests. The system processes this information using AI and generates a structured itinerary that includes recommended attractions, activities, and travel schedules. The application provides an easy-to-use interface for viewing, modifying, and saving travel plans.
3.	Novelty / Uniqueness	The uniqueness of this solution lies in its ability to automatically generate personalized travel itineraries using intelligent recommendations. Instead of manually searching different platforms, users receive a complete travel plan in one place. The system provides customized suggestions based on user preferences, making trip planning faster, smarter, and more convenient.
4.	Social Impact / Customer Satisfaction	The Travel Itinerary Generator improves the travel planning experience by saving time and reducing stress for travelers. It helps users discover new destinations, plan their trips efficiently, and make informed travel decisions. The application increases customer satisfaction by providing personalized and easy-to-understand travel

		plans.
5.	Business Model (Revenue Model)	The application can generate revenue through multiple methods such as advertisements, partnerships with travel agencies, hotel booking platforms, and premium subscription services. Users may access basic itinerary generation for free, while advanced features such as detailed travel guides, hotel recommendations, and personalized suggestions can be offered through paid plans.
6.	Scalability of the Solution	The Travel Itinerary Generator can be scaled to support a large number of users and destinations. As the system grows, more travel locations, attractions, and user data can be integrated. Cloud deployment and efficient backend processing allow the platform to handle increasing user requests and expand globally.
